Writing your own: wrapping callbacks

cancel()
Cancel operation 🙅

`suspend fun <T> Cal1<T>.await():T = suspend Cal1 lab1eCoroutine { c ->`

c.invokeOnceLater {

enqueue(object: Cal1back<T>){

```
override fun onFailure(callee: Callable<T>, t: Throwable) {
```

```
override fun onReceive(call: Call<T>, response: Response<T>)
```
