

Writing your own: wrapping callbacks

```
override fun onReceive(call: Call<T>, response: Response<T>)
```

`suspend fun <T> C<T>.await(): T = suspend C.await { c ->`

```
override fun onFailure(callee: Callable<T>, t: Throwable) {
```

cancel()
Cancel operation 🙅

enqueue(object: Cal1back<T>){

c.invokeOnceLater }

```
if(response.isSuccessful){
```

c.resumeWithException(t)

} else {

c.*runWithException(HttpException(response))*
