

Functions signatures

```
interface TheirApi {  
    @GET("answer_to_ultimate_question")  
    fun answerToTheUltimateQuestion(): Call<Int>  
}
```

```
api.answerToTheUltimateQuestion().enqueue(object : Callback<Int?> {  
    override fun onFailure(call: Call<Int?>, t: Throwable) {  
        TODO("Handle other errors here")  
    }  
}
```

```
        override fun onResponse(call: Call<Int?>, response: Response<Int?>) {  
            TODO("Handle server errors here")  
        }  
    })
```

How to cancel it?

Why so verbose? 🤮

No access to local variables 😞
